

# **1 mod\_perl 2.0 at the biggest Japanese employment site**

## 1.1 Batara Kesuma <bkesuma (at) ml.gaijinweb.com> exclaimed:

- Date: Wed, 11 Jun 2003 15:20:45 +0900
- Traffic: 4 million pageviews / month
- URL: <http://www.find-job.net>

Find Job! <http://www.find-job.net> is the biggest computers and Internet related employment site in Japan, and it is running on mod\_perl completely. We have around 75000 registered users and 10000 registered companies. Our pageview is around 4 million per month. Our whole system was running under plain CGI written in Perl, until recently we changed it to mod\_perl ModPerl::PerlRun with HTML::Template templating system. On some scripts we saw up to 400% of speed improvement, and total CPU load average went down around 50%. The change from mod\_cgi to mod\_perl ModPerl::PerlRun itself was painless at all.

Right now we are working on our scripts, to make it mod\_perl ModPerl::Registry compatible. We are going to run our site on mod\_perl ModPerl::Registry once it is finished, and hope to see some more speed improvement.
